Used in our RSG 10-Year Warranty System.

PERMEABLE & PRESSURE WASHER SAFE

No More Joint Replacement

ROMEX permeable jointing products are incredibly easy to install and can be effectively pressure-washed at 2000 PSI. They also prevent ant hills and weed growth, eliminating the need for replacement or touch-ups for decades, making them perfect for any project or paver type.

**ENDLESS
POSSIBILITIES**

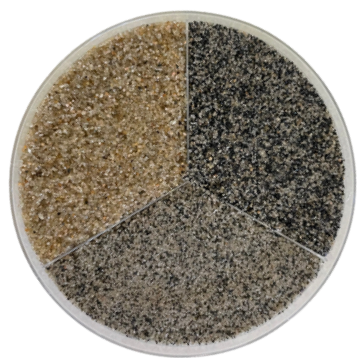

How it Works &
Paver Options

HOW IT WORKS?

ROMEX resin jointing sand only bonds at each grain's contact point leaving pathways for the water to flow through. They remain intact even when withstanding pressure washing or vehicle traffic, making them resistant to pesky ants and weeds.

Jointing Options:

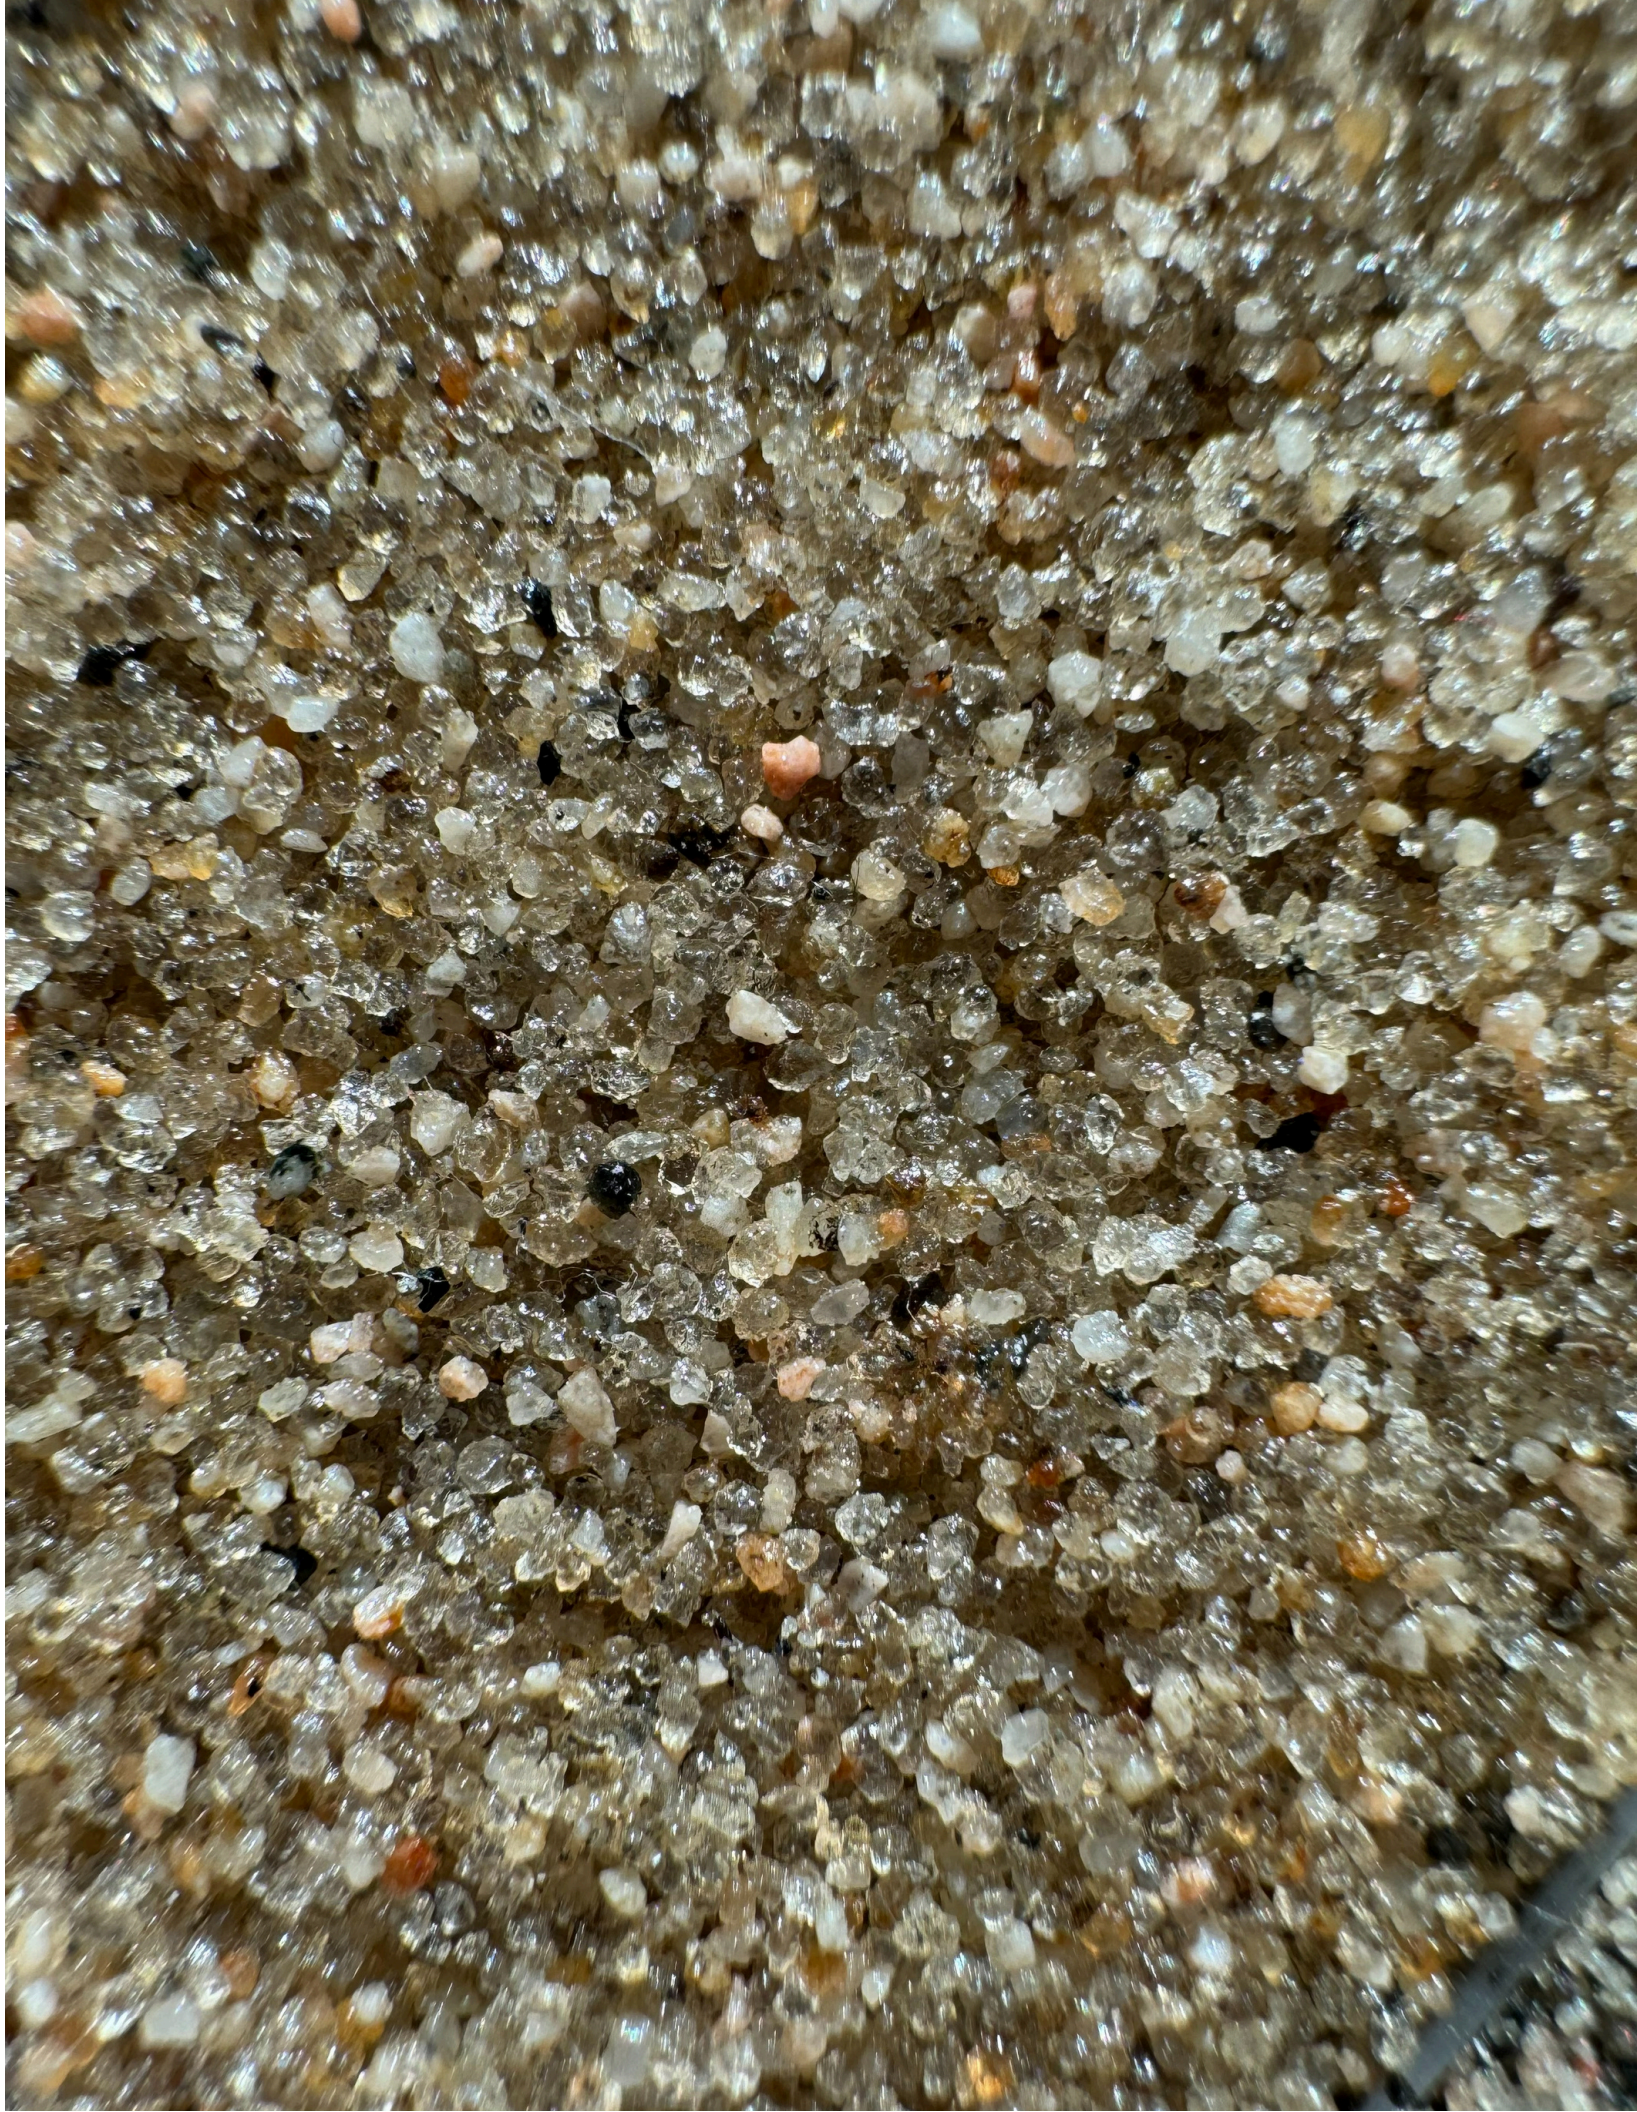

- Basalt
- Neutral
- Stone Grey

PAVER OPTIONS

Our jointing products are compatible with any paver type and can fit between joint widths of 1/16" - 6" | 1mm - 152mm

- | | |
|-------------|-----------------|
| ✓ Concrete | ✓ Natural Stone |
| ✓ Porcelain | ✓ Wood Block |
| ✓ Flagstone | ✓ Clay Brick |

APPLICATIONS

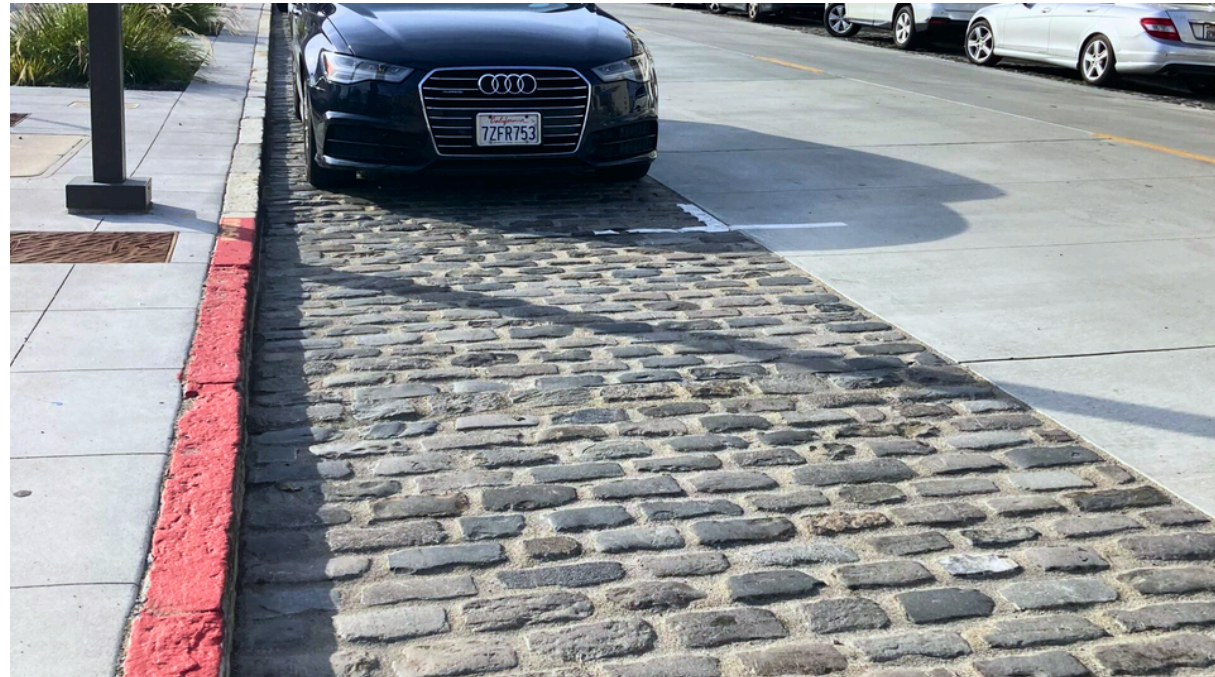

Residential &
Commercial

RESIDENTIAL

ROMEX jointing products are incredibly easy to work with and maintain the same level of durability and beauty as the day they were installed. They are also pressure washer safe, reducing the time and cost of maintenance and ensuring a stunning surface all year round.

COMMERCIAL

Our durable jointing products allow for very flexible design options and can comply to strict permeability regulations on green infrastructure projects. When combined with our ROMEX system guarantee (RSG), your surface will qualify for our 10-year warranty.

WHY ROMEX JOINTING?

Jointing Benefits

JOINTING BENEFITS

One Time Install

Forget traditional jointing sand that requires replacement every two to three years, ROMEX jointing is a one and done product that saves you money long-term.

Ant & Weed Resistant

Our solid resin bonded product line prevents ants and weeds from making a mess, keeping your surface looking like the day it was installed.

Pressure Washer Safe

Reduced maintenance is another major benefit of our jointing products. Simply pressure wash the surface at 2000PSI to clean any debris that gathers in the joints.

Easy to Use

Our products are incredibly easy to install. It's a quick stand-up install that allows you to complete more jobs in less time compared to traditional mortar methods.

Highly Water Permeable

A more sustainable alternative that can comply to strict permeability regulations and saves surfaces from root upheave damage.

PRODUCTS

Permeable & Durable
Product Line

ECOFINE

Resin Jointing Sand

ECOFINE ready mixed jointing mortar is incredibly easy to install and perfect for joint widths greater than 1/8" | 3mm on porcelain tile and 1/4" | 5mm on natural stone or concrete pavers. Wet the surface, empty the vacuum-packed mortar then just apply water and squeegee the product into the joints. Once ECOFINE reacts to the air it will harden preventing ants/weeds and eliminating the need for replacement or touchups.

- Compatible with any paver
- Resin film free
- Highly water permeable
- Ready-mixed
- Pool chemical resistant
- Easy to use

Scan for more info!

Ideal for pool decks, patios and pathways.

FUGENSAND

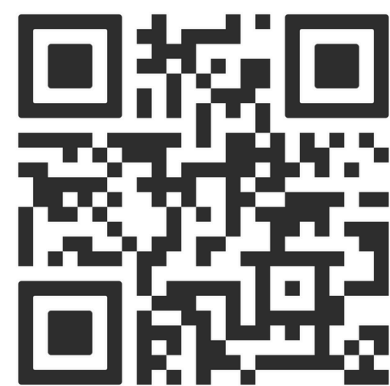

Jointing Sand & Stabilizing Sealer

FUGENSAND is perfect for narrow joint widths between 1/16" - 1/4" | 1mm - 5mm and works well for any unbonded projects. This combo is incredibly easy to install, just sweep the sand into the joints, hose down the surface and squeegee the sealer on top. Due to its stabilizing properties, this sand is now pressure washer-safe, ensuring the surface stands the test of time.

- 2 in 1 stabilizer/sealer
- Pressure washer safe
- No cement haze/residue
- Works with narrow paver joints
- Similar installation to poly sand

Scan for more info!

Ideal for driveways and interlocking pavers

DRAIN

Highly Permeable Jointing

This two-component jointing product is combined with water in a gravity mixer to create a slurry-like mortar that easily seeps into your paver joints using a squeegee on pre wet pavers. Wait 15 minutes, then just brush off the excess product to reveal your completed highly permeable surface. This is great for working with strict permeability regulations on green infrastructure projects and is compatible with joint widths greater than 1/4" | 5mm.

- For light traffic loads up to 3.5 T
- Self-compacting
- Pressure washer safe
- Highly water permeable
- Frost and de-icing salt resistant

Scan for more info!

Ideal for Green Infrastructure projects.

D1

Commercial Resin Jointing

ROMEX D1 installs just like all of our other two-component jointing mortars and is a great solution for public spaces and areas requiring vehicle use on joint widths greater than 1/8" | 3mm on porcelain tile and 1/4" | 5mm on natural stone or concrete pavers.

- For traffic loads up to 7.5 T
- Self-compacting
- Pressure washer safe
- Increased pouring capacity & water emulsifiable

Scan for more info!

Ideal for plazas & light to medium traffic loads.

D2000

Heavy Vehicle Jointing

The strongest product in our jointing line, D2000 is similar to D1 but allows for a quick re-opening to vehicle use and is resistant to street cleaning vehicles. This compound has a strong pouring capacity that is self-compacting, permeable and suitable for over 1/4" | 5mm wide joints on all natural stone or concrete pavers. Just like our other products D2000 is resistant to ants, weeds, frost, de-icing salts and is pressure washer safe.

- For traffic loads up to 25 T
- Pressure washer safe
- Resistant to de-icing salts
- Allows for quick re-opening to traffic

Ideal for heavy commercial loading.

FLEX JOINT

Flexible Resin Jointing

The world's first flexible and permeable jointing mortar is made from a combination of sand, rubber and visco elastic resin and is perfect for unbonded surfaces. This innovative product is a perfect replacement for loose grit and allows for regular pressure washing. Simply mix with water in a cement mixer or directly in the bucket with a drill mixer on smaller projects. FLEX JOINT is compatible with any joint width over 3/8" | 8mm and is perfect for use on permeable pavers or control joints in bonded construction.

- Vehicle loading up to 25 T
- Ideal for unbonded construction
- Bonded performance on unbonded application
- Used in combination with our ISATec 5-year warranty displacement protection system

Scan for more info!

Ideal for parking lots & permeable pavers.

W1000

Cold Climate Jointing

W1000 synthetic resin jointing mortar can be installed at negative temperatures as it will successfully cure in temperatures as low as -5 °C | 23 °F. It is resistant to street cleaning vehicles, allows for the quick re-opening of traffic and is ideal for public spaces and commercial yards. The compound has a high strength rating and is suitable for over 3/8" | 8mm wide joints on all natural stone and concrete pavers.

- For traffic loads up to 25 T
- Can be installed up to -5 °C | 23 °F
- Resistant to street cleaning vehicles
- Ideal for winter construction projects
- Allows for quick re-opening to traffic

Scan for more info!

Ideal for winter projects down to -5 °C / 23°F.

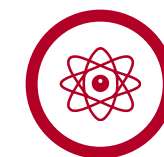

KEEP IN MIND...

In most situations, ROMEX ECOFINE or FUGENSAND will meet your jointing needs, but in some cases our specialty jointing options may apply.

Check out our RSG brochure to see how to receive 10-year warranty and allow for vehicle loading upwards of 40T!

ASK HOW TO RECEIVE 10-YEAR WARRANTY

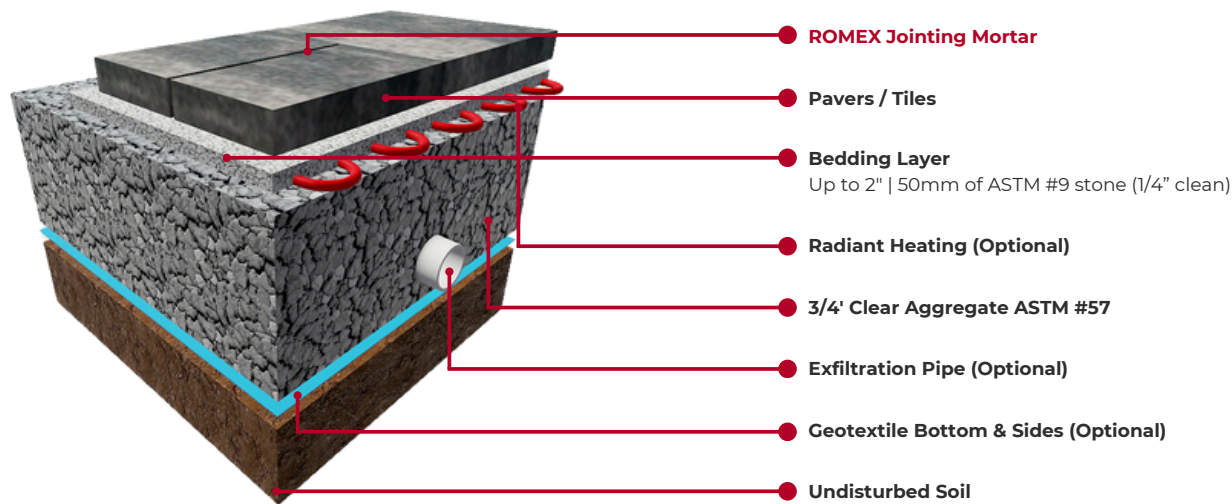

RSG With Pavers

Permeable bonded system with a 10-year warranty for setting of natural stone, concrete pavers, clay brick or wooden pavers to support all load classes.

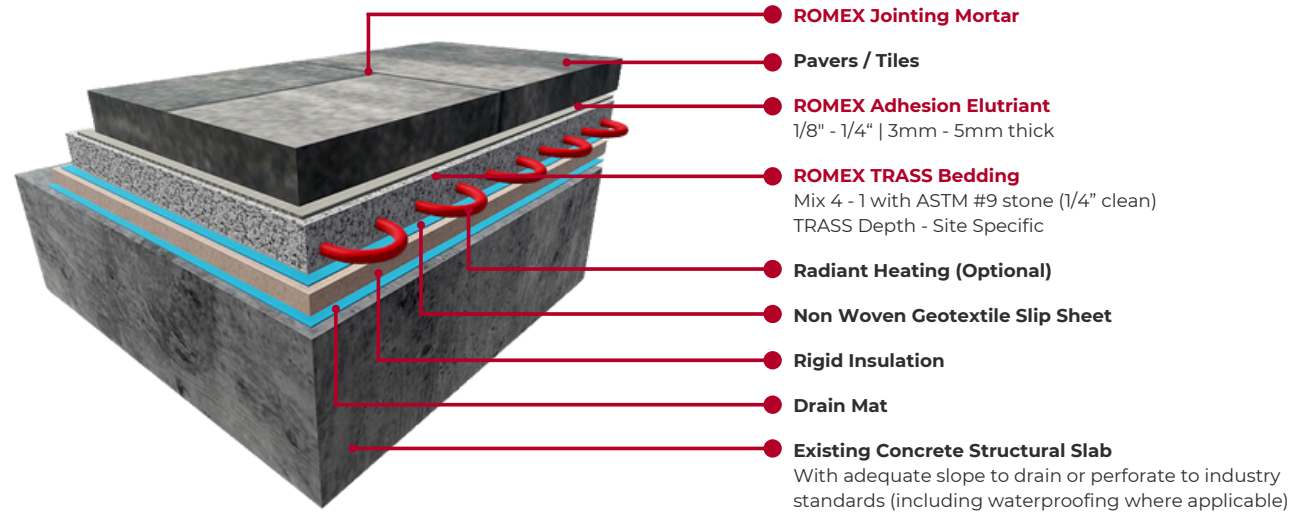

Open Graded

The ideal permeable unbonded settlement and frost-free paver base system.

Insulated Slab

Permeable bonded system for roof deck systems where R-value must be considered.

Bonded Edge Restraint

For pedestrian and vehicular areas providing a permeable and concealed edge for unbonded paving systems allowing a seamless transition to softscapes or other adjacent surfaces. 5-Year Warranty
